Divyam Singh Rauthan

Software Engineer

divyamrauthan002@gmail.com 9368866508 Dehradun, Uttarakhand Linked In Portfolio

SUMMARY

Software Engineer with 3 years of experience building scalable, high-performance web applications and product-based systems. Specialized in React, TypeScript, JavaScript, and the MERN stack, with expertise in reusable component architecture, dynamic form systems, state management, and performance optimization. Skilled in developing RESTful APIs using Node.js and Express.js, working with MongoDB, and using Python for scripting, automation, and backend development. Experienced in building enterprise-grade solutions across WMS, OMS, and multi-channel platforms. Proven ability to design efficient, maintainable, and user-centric applications while delivering high-quality solutions in fast-paced environments.

EDUCATION

Bachelor of Technology (CSE) 07/2019 – 07/2023
Graphic Era Hill University Dehradun, Uttarakhand

PROFESSIONAL EXPERIENCE

Frontend Developer 08/2026 – Present
Chervic Advisory Services Bangalore, Karnataka (Remote)

- Leading the frontend development team for the **Sila Dashboard**, overseeing feature development, task allocation, and timely delivery.
- Developing scalable and responsive web applications using **React.js and TypeScript**, following clean and maintainable coding practices.
- Implementing efficient global state management using **Zustand** and designing reusable components for better application scalability.
- Reviewing code, maintaining coding standards, and providing technical guidance and mentorship to team members.
- Collaborating with product, design, and backend teams to translate business requirements into robust and user-friendly frontend solutions.
- Optimizing application performance, resolving complex frontend issues, and ensuring a stable and high-quality dashboard experience.

Software Engineer (SDE-1) 09/2024 – 06/2026
Omniful Private Limited Gurugram, Haryana

- Developed scalable frontend applications using React and TypeScript for Warehouse Management Systems (WMS), Order Management Systems (OMS), and Sales Channels.
- Designed and implemented reusable, modular UI components, reducing development time and improving consistency across multiple modules.
- Built configuration-driven centralized form architecture, reducing form development effort and minimizing code duplication.
- Developed reusable side sheets for create/update workflows, improving maintainability and user experience.
- Implemented and enhanced key features across WMS and OMS, including inventory management, order processing, and tracking workflows.
- Contributed to a white-label admin dashboard, enabling multi-tenant customization and flexible branding support.
- Integrated REST APIs and managed asynchronous data flows to ensure seamless frontend-backend communication.
- Optimized application performance using memoization, lazy loading, and code-splitting techniques, improving responsiveness.

Software Engineer Intern 04/2024 – 08/2024
Code Ji Private Limited Dehradun, Uttarakhand

- Developed a Taxi Management System using JavaScript and React, enabling booking, driver allocation, and trip tracking functionalities.
- Built a dynamic admin dashboard for managing users, drivers, and ride data with real-time updates.
- Implemented reusable UI components and improved application responsiveness through performance optimizations.
- Integrated REST APIs for booking operations, user management, and system workflows.

SKILLS

Languages & Core
JavaScript, TypeScript, HTML, CSS

Frontend
React.js, React Hooks, Functional Components, Component-Based Architecture

Backend
node.js, express.js, Python

State Management & Routing
Redux Toolkit, Context API, React Router, Zustand

UI & Styling
Tailwind CSS

Architecture & Concepts
Reusable Components, Custom Hooks, Dynamic Forms, Configuration-Driven UI

API & Performance
REST API Integration, Async Data Handling, Performance Optimization, Lazy Loading, Memoization

Tools
Git, GitHub, Cursor

Database
MongoDB

PROJECTS

Inventory Management System | MERN Stack
- Git hub - link
- Project - link
- Developed a multi-organization inventory management system using React 19, Redux Toolkit, Node.js, Express 5, and MongoDB.
- Implemented warehouse workflows covering Purchase Orders, Gate Entry, Goods Receipt Notes (GRN), inspection, putaway, and stock management.
- Built role-based access control with configurable permissions, organization-level data isolation, and dynamic navigation.
- Implemented stock tracking, inventory adjustments, and transaction history with an append-only audit logging system.
- Developed configurable dashboards, inventory analytics, and audit logs for inventory, catalog, configuration, users, and roles.

Green Paradise (E-commerce Website)
- Git hub - link
- Project - link
- Developed a responsive e-commerce platform for plant shopping using HTML, CSS, and JavaScript.
- Implemented product browsing, filtering, and cart functionality for a seamless user experience.
- Focused on clean UI design and intuitive navigation.
